Dual-Modality Molecular Identification

Numerical (S-Entropy) + Visual (CV features) → Categorical completion

Numerical Space (S-Entropy)

$s\_S\text{-}ent = 0.72$

Visual Space (CV features)

$s\_SIFT = 0.68, s\_flow \approx 0.74, s\_SSIM \approx 0.71$

Categorical state: numerical AND visual thresholds passed → boost

$s\_final = 1.5 \times s\_combined$
